

Equotip 550 Leeb

## Stator wedge inspection

Although Equotip Leeb devices are typically utilized for material hardness testing, there are number of additional application possibilities especially for verification and comparator measurement purposes.

Safety aspects and the high dependency of modern day life on electricity dictate the carrying out of thorough health check regimes to verify a generator’s performance. Checking the tightness of the stator wedges is an extremely important task when it comes to the initial commissioning of a generator, as well as maintaining the efficacy of the system throughout its life cycle.
