

Equotip 550 Leeb E

Quick hardness verification of steel rolls

Many of our customers need a solution to quickly verify roll hardness throughout the various processes involved in roll production. Proceq's Equotip 550 Leeb E provides the perfect solution supplying a long lasting diamond indenter to withstand repeated use at the higher Rockwell C range.

The Verification Wizard feature provides proof to the quality team that the system is functioning correctly prior to use by storing the required test data automatically. The hardness values are immediately stored within the instrument and can be easily accessed or transferred as required for reporting and archiving using the USB connection.
