

Equotip 550

Combined hardness testing methods to cover new material groups and geometric restrictions

The Equotip 550 has a huge advantage in combining the hardness Leeb, Rockwell and UCI test principles in one instrument. As well as the advantage of having one instrument and thus being able to use different test principles, the instrument also offers the opportunity of combining two methods which opens up new possibilities. For example, new material groups can be easily covered or geometric restrictions can be overcome as Proceq customers in the oil & gas industry have discovered.
