

Equotip 550 Portable Rockwell

## Time-saving hardness testing of steel rings

Many customers need to test the hardness of steel rings to sort a mixed batch of both, hardened and soft parts. The Equotip 550 Portable Rockwell with measuring clamp held the rings in the proper position, allowing for a reliable and repeatable test.

The portability of the Equotip 550 allows the customer to save time as there is no need to relocate the components to the metallurgical lab - the testing can be done directly at the location of the parts.
