

Equotip 550 Portable Rockwell

Convenience hardness testing of thin automotive parts

The manufacture of an automobile involves the manufacture and assembly of many high quality, precision engineered components. Hardness testing plays a crucial role in ensuring that the parts have been manufactured correctly and that they will thus perform according to specification during the operational lifetime of that vehicle.

The Equotip 550 Portable Rockwell hardness tester is used for testing very thin and individual parts. It offers users unmatched convenience and cost savings to test these parts using a non-destructive method. Proceq has years of experience handling the needs and requirements of the car industry and automotive standards.
