

Equotip Piccolo 2 / Bambino 2

## Metal hardness testing in building industry

The Equotip Piccolo 2 / Bambino 2 instruments are usually used in the classical field of metal hardness testing, for example in heat treatment shops or for quality checks of incoming materials to verify the true hardness value.

But it is now also used in the building industry by engineering companies to test the hardness of tensioning ropes and steel beams during the reconditioning of buildings and bridges. The goal is to find out if these components need to be replaced.
