

PaperSchmidt

## Measuring paper roll quality

Lottery tickets are made of a special paper which requires a high quality for printing purposes. Hardness testing on the original paper roll is a very important procedure to make sure the paper meets all criteria.

The PaperSchmidt is the first rebound hammer designed specifically for the testing of the roll profile. Extensive field tests carried out at major manufacturers and converters in the United States and Europe have consistently shown that it provides previously unachievable accuracy and repeatability of roll profiles.
