

PaperSchmidt

Roll testing on very soft tissue paper

The PaperSchmidt is not only used to test regular paper rolls, but also very soft tissue paper can be tested. Our customers are interested both in the roll hardness and even more in the detection of defects (e.g. inclusions) and humidity.

In fact, there is a great variety of roll testing applications where the PaperSchmidt or the Equotip 550 Leeb U roll testers can be used: Film rolls, leather rolls, wallpaper rolls - and many more.
