

Proceq DY-216

## Bond strength testing on skim coat

Customers in the construction industry are using the Proceq DY-2 pull-off testers to perform tests on skim coat (wall putty). Skim coats are thin layers of cementitious plaster for exterior and interior concrete surfaces.

The tests are conducted to verify the bonding quality of the skim coat against the concrete surface by measuring the dry adhesion of the skim coat. The Proceq DY-2 meet the criteria specified within [ASTM D4541](#).
