

Profometer Corrosion

Effective half-cell potential measurement on large areas

In this application example, Proceq's Profometer Corrosion with wheel was used for a half-cell survey conducted to the internal surface of a reinforced concrete dome structure. The project was the Four Courts Building in Dublin which is a late 18th century building and home to Ireland's main law courts.

The customer found the instrument invaluable as they were able to cover a large and difficult area quickly and accurately. Downloading the results and imaging to their Surface-Pro was highly beneficial using the Profometer Corrosion software.
