

Pundit Lab

Ultrasonic uniformity testing of slabs used for mass rapid transportation

Pundit Lab is used to check the uniformity of concrete structures. Amongst other things, it is used by testing and inspection agencies to test the quality and integrity of metro structures. Slabs with lengths of up to 5m have been tested successfully by our customers.

The underlying ultrasonic pulse velocity method is well-established - and Pundit has not only made it portable, but also reliable and fast. Hundreds of measurements are completed on a daily basis with a single Pundit instrument.
